

Md. Jubaer Hosain

Associate Software Engineer
BSc. in Software Engineering

www.cefalo.com

Career Summary

- Proficient in full-stack web application development using ExpressJs, NestJs, ReactJs and NextJs.
- Experienced with database technologies like PostgreSQL, MySQL and MongoDB.
- Competence in developing scalable RESTful APIs.
- Familiar with Python frameworks and libraries like Fast API, Scikit-learn and Keras.
- Familiar with git workflow, jenkins and DevOps.
- Excellent team player with good problem-solving skills and self motivation.
- Experienced in developing modern software by following agile software development principles and patterns.

Tools & Technology

- Programming Languages: Javascript, Typescript, Java, Python, C, C++
- Back-end: ExpressJs, NestJs, FastAPI
- Front-end: ReactJs, Next.js, Tailwind CSS, Shadcn UI, HTML, CSS, Localization
- Databases: PostgreSQL, MySQL, MongoDB, Redis
- Workflow, Queues & Async: Temporal workflows, Bull queues, cron jobs, background workers, event-driven architecture
- Payments & Billing: Stripe, Vipps, Nets, SwedbankPay, EHF/Avtalegiro e-invoicing, recurring billing and dunning
- Communication & Messaging: SendGrid, SMS, Firebase Cloud Messaging push notifications
- Observability & Monitoring: Datadog, Sentry, structured logging, production incident response
- DevOps, Cloud & CI/CD: Docker, Docker Compose, AWS, Render, GitHub Actions, Git
- Testing: Jest, unit and integration testing
- Auth & Security: JWT, OIDC/OAuth 2.0, RBAC, multi-tenant isolation
- Other: Swagger/OpenAPI, Jira, Linear, MinIO, SOLID design patterns and principles

Experience

within Cefalo

Project & Client:
Subrite

Description:

<u>Role:</u> Associate Software Engineer II <u>Duration:</u> March, 2026 - July, 2026	- Designed and built the platform-wide tenant isolation layer, turning multi-tenant safety from a per-query convention into an enforced guarantee, then rolled it out across the platform's core modules. - Led billing and payment correctness work across recurring-payment workflows and all four card providers, ending a recurring class of incorrect-charge and missed-invoice incidents. - Built operator recovery tooling that recovered real customer payments taken at the payment provider but never recorded locally, without double-charging. - Made the platform's largest enterprise subscriptions usable at scale by replacing unbounded data loading with paginated APIs and consolidating duplicated admin and member-portal interfaces. - Closed cross-tenant and cross-user data exposure paths, and repaired corrupted billing data in production safely and verifiably. - Worked independently across backend, frontend and database, coordinating directly with the product owner, CTO and non-technical customer support to triage escalations and agree scope. <u>Tools/Technology:</u> TypeScript, Python, SQL, NestJS, Next.js, React, PostgreSQL, Redis, Temporal workflows, CLS request context, Stripe, Vipps, Nets, SwedbankPay, EHF/Avtalegiro e-invoicing, SendGrid, Firebase Cloud Messaging, Swagger/OpenAPI, Jest, Docker, Docker Compose, CI/CD, Datadog, Linear
<u>Project & Client:</u> Subrite <u>Role:</u> Associate Software Engineer I <u>Duration:</u> March, 2025 - Mar, 2026	<u>Description:</u> - Delivered full-stack features across Subrite, a multi-tenant subscription-management SaaS for Nordic media, using NestJS and Next.js. - Led onboarding of new tenants with diverse payment integrations including Stripe, Vipps, Nets, SwedbankPay and EHF/Avtalegiro e-invoicing. - Moved tenant configuration from staff-mediated to self-service across settings, branding, communication and payment providers, reducing day-to-day operational load on the internal team. - Improved communication and email infrastructure on SendGrid, improving deliverability, consent handling and templates. - Delivered invoicing improvements that unblocked payment from business customers, alongside reusable embeddable widgets and hosted forms for tenant websites. - Built repeatable tenant onboarding data migrations, making new tenant imports reviewable, repeatable and safe to hand over. - Carried production hotfix and support-escalation ownership, communicating proactively with the product owner and non-technical customer support to keep integrations reliable. <u>Tools/Technology:</u> TypeScript, Python, SQL, NestJS, Next.js, React, PostgreSQL, Redis, Bull queues, SendGrid, Stripe, Vipps, Nets, SwedbankPay, EHF/Avtalegiro e-invoicing, MJML, next-intl, Tailwind CSS, Cloudflare Images, Jest, CI/CD, Sentry, Linear
<u>Project & Client:</u> Payroll, Cefalo	<u>Description:</u>

<u>Role:</u> Trainee Software Engineer <u>Duration:</u> May, 2024 – Feb, 2025	- Contributed to Cefalo's in-house Payroll system, building both backend and frontend features with NestJS and Next.js. - Delivered employee management, salary calculation and tax compliance workflows that replaced manual payroll processing. - Integrated Kafka as a message broker to enable asynchronous data exchange with related systems such as the HR Portal. <u>Tools/Technology:</u> TypeScript, NestJS, NextJS, MySQL, TypeORM, MinIO, Swagger, Kafka, Docker, Docker Compose, CI/CD
<u>Project & Client:</u> Cefalo ATS, Cefalo <u>Role:</u> Trainee Software Engineer <u>Duration:</u> November, 2024 – December, 2024	<u>Description:</u> - Joined the Cefalo ATS (Applicant Tracking System) team for a one-month engagement and became productive on an unfamiliar codebase quickly. - Investigated and fixed reported defects across both backend and frontend, improving the stability of the recruitment workflow. <u>Tools/Technology:</u> TypeScript, NestJS, NextJS, MySQL, Prisma, Swagger, Docker, Docker Compose, CI/CD
<u>Project & Client:</u> Cefalo Blog, Cefalo <u>Role:</u> Trainee Software Engineer <u>Duration:</u> March, 2024 – May, 2024	<u>Description:</u> - Completed two months of intensive training on HTTP, REST and core web and internet concepts, then built a full-stack dynamic blogging platform end to end. - Delivered post authoring with a rich text editor and image uploads, along with social features including likes, comments and threaded replies. - Implemented secure JWT authentication with both credential-based and social login, and role-based access control separating readers, authors and post owners. - Wrote unit tests with Jest to keep the platform reliable as functionality grew. <u>Tools / Technology:</u> TypeScript, ExpressJS, MySQL, Sequelize, ReactJS, Tailwind CSS, Cloudinary, Docker, Jest

Education & Certification

- B.Sc. in Software Engineering from Institute of Information Technology, University of Dhaka (2019 - 2024)
- Champion, Independence Cup 2022 Programming Contest
- 6th position in Phitron Programming Contest 2022
- 17th position in SEC Inter University Junior Programming Contest 2022
- ICPC Asia Dhaka Regional Site Online Preliminarist 2021 & 2022
- Finalist at BUET CSE FEST 2023 Hackathon
- Code Samurai 2024 Participant
