EXPERIENCE

Cefalo Bangladesh Ltd. Dhaka · Jan 2024 to Present

Associate Software Engineer II (Mar 2026 to Present) · **Associate Software Engineer I** (Mar 2025 to Mar 2026), full-time
Client: Subrite, a multi-tenant subscription and media monetization SaaS built for a Nordic client and live in production with publishers.

- **Designed and rolled out multi-tenant isolation**, enforcing tenant-scoped data access across the platform after finding and fixing two cross-tenant data exposures myself.
- **Improved recurring-payment reliability** across Stripe, Vipps, SwedbankPay, and Nets by unifying each provider's charge guards into one idempotent payment workflow, preventing duplicate charges and missed billing events.
- **Diagnosed and resolved a production payment incident**: non-idempotent Temporal activities re-ran charges and external API calls on workflow replay. Made them replay-safe and built an operator recovery tool that restored **~1,000 unrecorded transactions** without double-charging.
- **Improved dashboard and high-computation API performance** from **150 seconds to milliseconds** by implementing SWR caching and fixing N+1 query problem.
- **Led onboarding of new tenants**, mapping legacy systems with technical and non-technical stakeholders and writing repeatable, reviewable migrations of users, subscriptions, and payment-vault data with uninterrupted auto-renewals.
- **Owned features and production issues end-to-end**, from requirement to Jest-tested CI/CD release, then monitoring (Sentry, Datadog) and hotfixes, coordinating with product owner, CTO, and customer support.
- **Built team AI tooling** (MCP servers, subagents, Claude Code hooks) for planning, test generation and debugging.
- **Tools & Technology**: TypeScript, NestJS, Next.js, PostgreSQL, Redis, Temporal, BullMQ, Stripe, Vipps, Nets, Jest, Sentry, Datadog.

Trainee Software Engineer, (full-time Jan–Jun 2024, part-time thereafter) · Dhaka Jan 2024 to Feb 2025
Internal Cefalo products: Payroll (May 2024 – Feb 2025) and ATS (Nov – Dec 2024).

- **Cefalo Payroll**: Contributed to the NestJS/Next.js payroll platform, including salary calculation, tax workflows, and Kafka-based HR Portal integration; integrated **MinIO object storage** with isolated handling of confidential payroll documents, implemented **ACID transactions across service methods**, and proposed **AWS KMS envelope encryption**.
- **Cefalo ATS & Blog**: Fixed full-stack defects in an unfamiliar codebase within a month; built a blog with JWT, social login, RBAC.

SKILLS

LANGUAGES & FRAMEWORKS: TypeScript, JavaScript, SQL, C++, Node.js, NestJS, Express, React, Next.js, Tailwind CSS | *Moderate*: Python (FastAPI), Java, React Native
DATABASE, CLOUD & PLATFORM: PostgreSQL, MySQL, Redis, Docker, AWS, GitHub Actions, BullMQ, Jest, Testcontainers | *Moderate*: MongoDB, Temporal, Kafka, Terraform, Sentry, Datadog
SECURITY & RELIABILITY: Tenant isolation, JWT, OIDC/OAuth 2.0, RBAC, idempotency, PII anonymization, KMS envelope encryption
AI-ASSISTED DEVELOPMENT: Claude Code, MCP, subagents & hooks, RAG, Cursor | *Moderate*: LangChain, Anthropic SDK

PROJECTS

nestjs-transactions Jul 2026 to Present

- ★ **Tools & Technologies**: TypeScript, NestJS, TypeORM, Prisma, pnpm, GitHub Actions
- Published two MIT-licensed npm packages (~250 weekly downloads) implementing a `@Transactional()` decorator with `AsyncLocalStorage`-based transaction propagation and configurable isolation levels, integration-tested against real PostgreSQL in CI.

Mess Ledger Feb 2026 to Present

- ★ **Tools & Technologies**: NestJS, PostgreSQL, Expo, React Native
- Shipped meal-expense-splitting product whose API and mobile app share a generated OpenAPI client for wire-level type safety, with subscriptions, push notifications, PDF reports and Sentry.

CloudTask Jul 2026

- ★ **Tools & Technologies**: Turborepo, NestJS, Next.js, AWS ECS Fargate, RDS, SQS, S3
- Built an AWS reference architecture: web app, API, and SQS worker in one monorepo with Zod-shared contracts, Testcontainers and Playwright tests, and OIDC-authenticated ECR releases via GitHub Actions.

PROBLEM SOLVING & AWARDS

1700+ problems solved. **LeetCode Knight (top 5%)**, best rank 652 · HackerEarth rank 23 · CodeChef 4-star, rank 96 · Codeforces Specialist.
Champion, Independence Cup Programming Contest 2022 · **6th of 650+**, Phitron Programming Contest 2022 · **17th** in SEC IUJPC 2022 · **Onsite finalist**, BUET CSE FEST Hackathon 2023 · **Round 2**, Meta Hacker Cup 2023

COURSES

Anthropic: Building with the Claude API, Intro to MCP, MCP Advanced Topics · **SecureFlag**: Intermediate Secure Coding in Node.js · AWS Solutions Architect & Developer Associate (Udemy) · Mastering DevOps (Ostad)

EDUCATION

Institute of Information Technology, University of Dhaka 2019 to 2024
B.Sc. in Software Engineering Dhaka, Bangladesh
